

End of Life Documentation

General Availability (GA)

A major version is released as General Availability (GA) for all customers. The GA milestone signifies when a product can be bought.

End of Life Announcement (EOLA)

This is the date that a specific major product version will no longer be available for purchase. This is generally the date at which the replacement product will become available.

End of Maintenance (EOM)

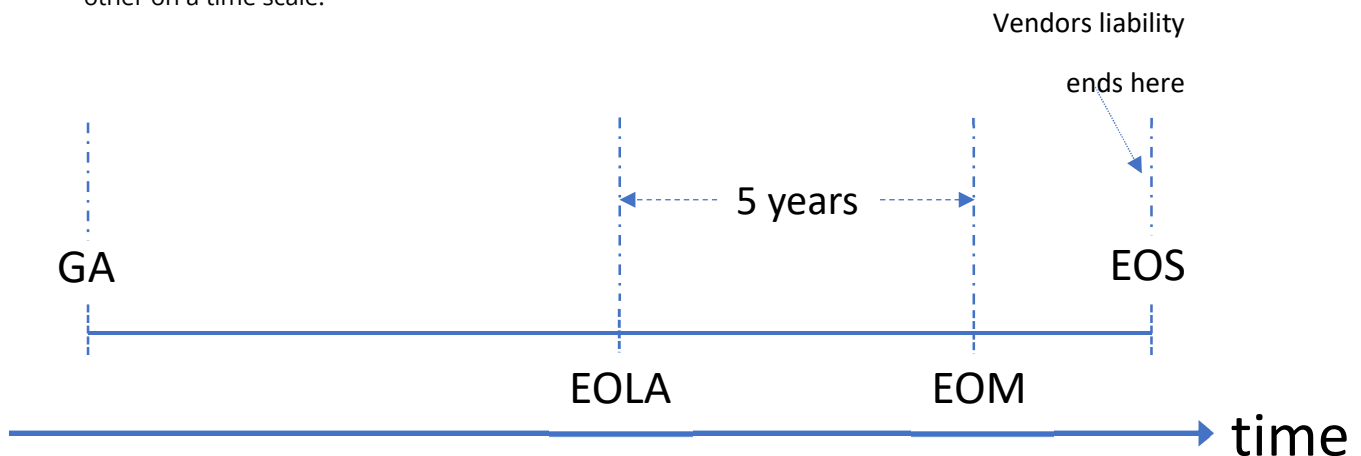

The End of Maintenance milestone marks the start of the product version retirement period. From this milestone, the product (firmware) version is no longer maintained by our support department. Functionality will be "as is". DARE!! Instruments generally uses the rule that the EOL date is based on 5 years after EOLA.

End of Support (EOS)

The End of Support milestone marks the date after which technical support for that product version will no longer be available, no repair service can (will) be performed anymore. These products are not supported in the latest software- and hardware versions of the RadiCentre platform.

End of Life tables

The picture below shows how 'end of life' milestones for consecutive versions are interconnected to each other on a time scale.
